

EMPLOYEE COVID VACCINATION STATUS RECORDING

Increasing Costs and Reducing Core Focus

In some Australian states, employers in select categories must not permit a worker who doesn't meet specified requirements to work outside their home. Select workers (including contractors, volunteers, and students on placement) may be required to show evidence of vaccination by a certain date to continue working outside their home.

Organisations around the country are also opting-in to mandate a vaccinated workforce.

The Administration Burden

Employers responsible for complying with vaccination requirements must collect, record, and hold vaccination information for any worker going on-site. If your organisation has chosen to mandate vaccination, the data collection process can be customised to meet your needs.

A record should include:

Name of the worker or individual accessing the site

Vaccination appointment booking (if relevant)

Name of who sighted the evidence

Vaccination status

Date the evidence was sighted

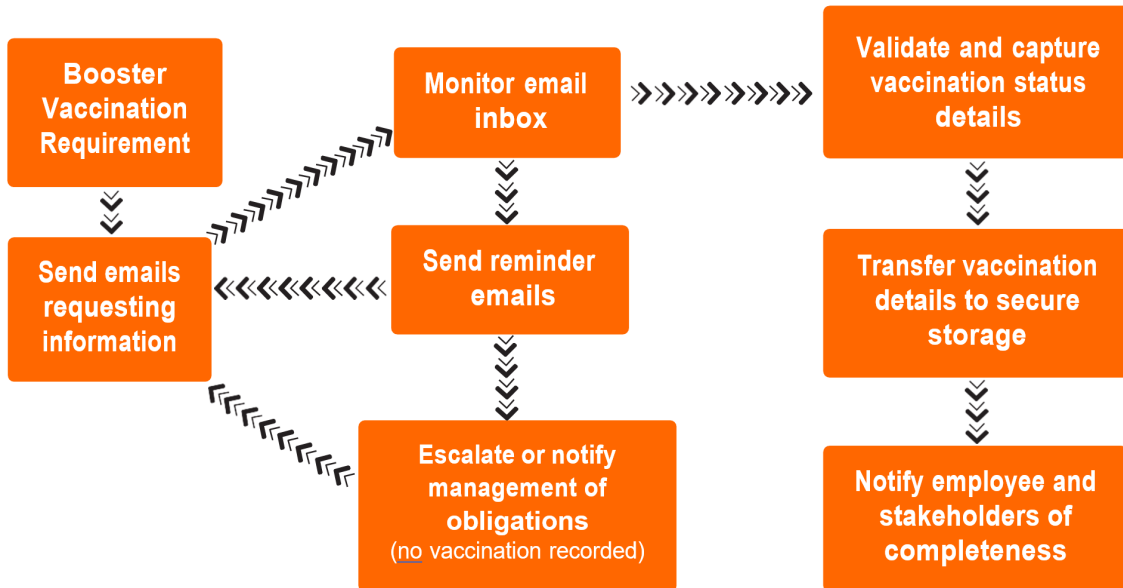

Nature of that evidence (COVID-19 vaccine digital certificate, immunisation history statement, or medical exception letter or certificate)

This could be extended to boosters at recurring intervals, effectively generating the full admin burden repeatedly with each booster requirement!

Reducing Cost, Time, and Risk

We have built an automation platform that automates the process of requesting (and follow up), documenting, storing, and updating your employee's vaccination status. Reducing your risk by tracking and escalating non-compliance. Our robots will reduce the time and cost required to meet your obligations - and improved accuracy will reduce your risk.

We have the solution to achieve your required outcome.

Would you like to see a 15-minute demonstration of the solution reach out to the team and we will be happy to discuss and tailor a demonstration for you.
